Warranty - Material

Hubbell Power Systems, Inc. warrants all products sold by it to be merchantable (as such term is defined in the Uniform Commercial Code) and to be free from defects in material and workmanship. Buyer must notify the Company promptly of any claim under this warranty. The Buyer's exclusive remedy for breach of this warranty shall be the repair or replacement, F.O.B. factory, at the Company's option, of any product defective under the warranty which is returned to the Company within one year from the date of shipment. NO OTHER WARRANTY, WHETHER EXPRESS OR ARISING BY OPERATION OF LAW, COURSE OF DEALING, USAGE OF TRADE OR OTHERWISE IMPLIED, SHALL EXIST IN CONNECTION WITH THE COMPANY'S PRODUCTS OR ANY SALE OR USE THEREOF. The Company shall in no event be liable for any loss of profits or any consequential or special damages incurred by Buyer. The Company's warranty shall run only to the first Buyer of a product from the Company, from the Company's distributor, or from an original equipment manufacturer reselling the Company's product, and is non-assignable and non-transferable and shall be of no force and effect if asserted by any person other than such first Buyer. This warranty applies only to the use of the product as intended by Seller and does not cover any misapplication or misuse of said product.

Warranty - Application

Hubbell Power Systems, Inc. does not warrant the accuracy of and results from product or system performance recommendations resulting from any engineering analysis or study. This applies regardless of whether a charge is made for the recommendation, or if it is provided free of charge.

Responsibility for selection of the proper product or application rests solely with the purchaser. In the event of errors or inaccuracies determined to be caused by Hubbell Power Systems, Inc., its liability will be limited to the re-performance of any such analysis or study.

NOTE: Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

Introduction

Ohio Brass has been producing high voltage surge arresters since the 1950's and offers a wide variety of metal oxide gapless arresters designed to protect transformers, switchgear, and other equipment from switching and lightning surges. These arresters meet or exceed all requirements of the most current IEC standard and can be selected to match a range of contamination and energy requirements.

Dedication to Quality

Ohio Brass has demonstrated that its Quality Management system is in compliance with ISO 9001:2008 and maintains stringent testing controls in accordance with IEC 60099-4 to ensure that the customer receives high quality with every product. Ohio Brass also performs Quality Assurance tests on every batch of metal-oxide varistor (MOV) blocks. The routine and design tests listed below, in addition to highly controlled manufacturing processes, ensure that Ohio Brass products demonstrate a superior level of quality. Our commitment to quality and continuous improvement is what the industry expects of its Leader.

MOV Block Routine Tests:

- **Physical Inspection** – Visual inspections are performed at several steps of the block manufacturing process.
- **Rated Energy Test** – This procedure confirms the energy capability of each zinc oxide block element.
- **Residual Voltage Test** – Every block undergoes an 8/20 current wave impulse to verify its V-I characteristics.
- **Watts Loss Test** – This test measures the AC watts loss and capacitive current characteristics of the block.

MOV Block Batch QA Tests:

- **Square Wave Energy Test** – Performed on a 5 block sample from each batch, this test is performed to quantify the batch energy capability.
- **High Current Test** – Each 5 block sample is subjected to two high current discharges of the same polarity to ensure high current characteristics.
- **A/C Life Test** – The blocks are placed under test conditions for a minimum of 250 hours to verify performance.

Type Test Reports are available for download at the website:

(1) For normal duty. Line-to-ground fault up to 30 minutes

(2) For severe duty. Line-to-ground fault up to 2,000 hours

Arrester Application

Selecting an appropriate arrester requires knowledge about the system and specific application parameters such as:

- Maximum system voltage and grounding type (effectively grounded, impedance grounded, ungrounded)
- Insulation level of protected equipment and desired Margin of Protection
- Possible durations and levels of power frequency overvoltages
- Lengths of conductor that will carry switched loads
- Mechanical loads placed on the arrester
- Available line-to-ground fault current
- Environmental conditions and severity of site pollution

The primary factor in determining the correct arrester voltage is its Continuous line-to-ground Operating Voltage rating (U_c or COV). When selecting the appropriate arrester for an effectively grounded neutral system, it is desirable to choose an arrester with the lowest U_c that will meet or exceed the system's maximum line-to-ground voltage. The following example illustrates the selection.

Arrester Application Example

In grounded neutral circuits, a 233kV system usually has a maximum line-to-line continuous voltage of 245kV rms. This 245kV divided by $\sqrt{3}$ equates to a 141.5kV line-to-ground voltage. The appropriate arrester for this application is an arrester with a U_c of 144kV since it is the lowest standard U_c that will meet or exceed the line-to-ground voltage.

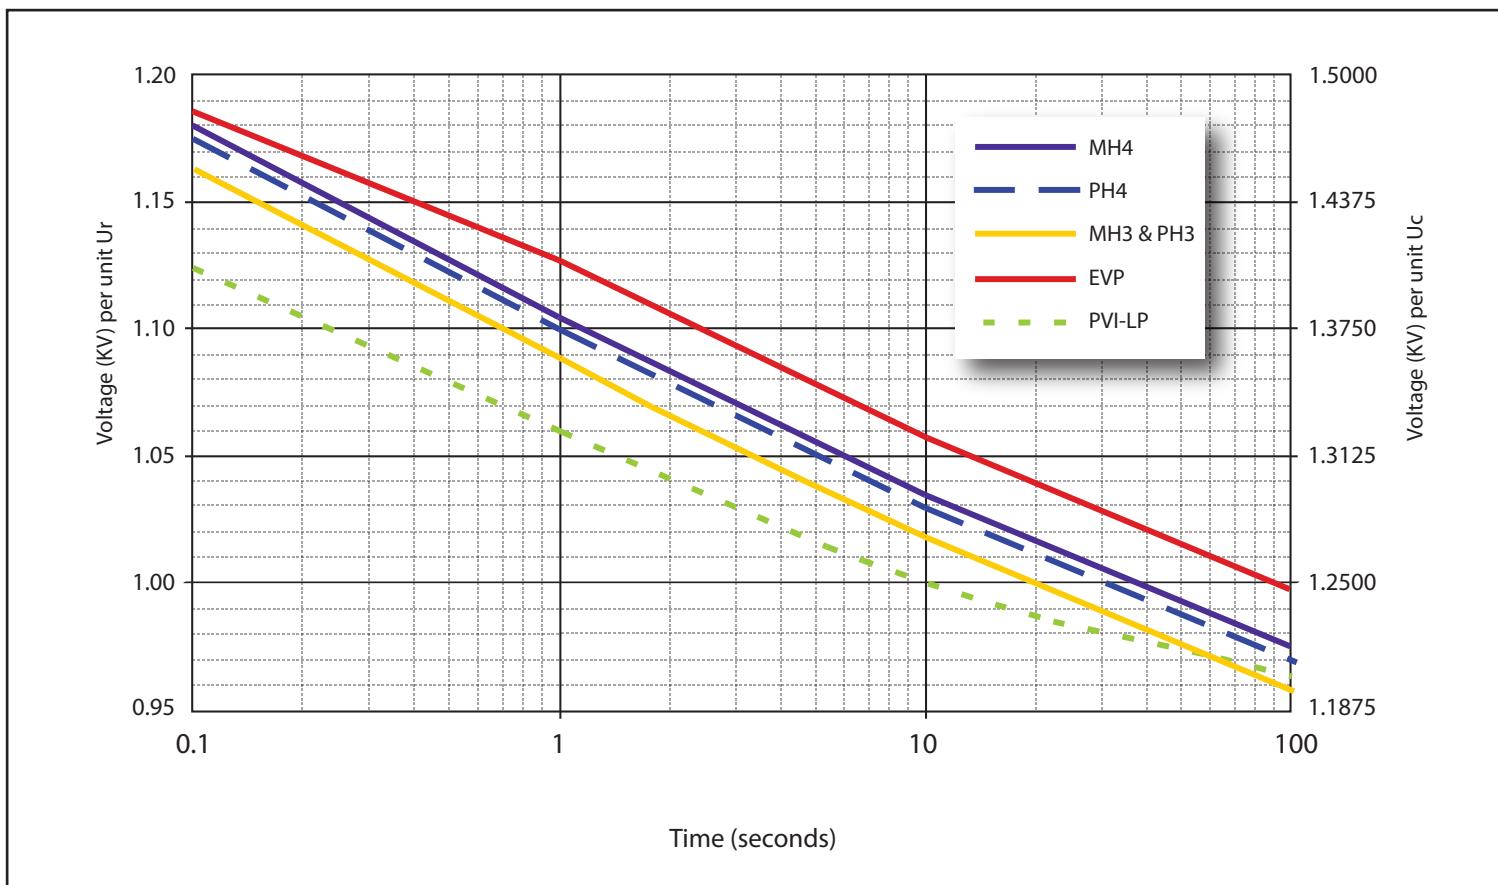

On ungrounded or impedance grounded systems, use the following selection guidelines to choose the best arrester:

- For applications where a ground fault is expected to be removed within 30 minutes, the minimum U_c is the maximum system line-to-line voltage divided by 1.25.
- For extended operation under ground fault conditions as long as 2,000 hours, the minimum U_c is the maximum system line-to-line voltage divided by 1.11.

Arresters are designed to be used where average ambient temperature does not exceed 40°C (104°F) and the daily maximum temperature does not exceed 60°C (140°F).

For further assistance Hubbell Power Systems application engineers are also available to provide system specific recommendations for many different arrester applications.

IEC Temporary Over-Voltage (TOV) Capability with Prior Duty

Temporary Over-Voltage Capability

Hubbell Power Systems arresters are gapless and consist of a column of metal-oxide blocks connected between line and ground. The blocks can withstand a significant power frequency overvoltage for a limited time, depending on the magnitude of any immediately preceding surge duty. This duty can be the result of switching surges on higher voltage lines, or from other sources. The temporary overvoltage capability can be determined from the TOV curve. The prior duty curve is based upon absorption of rated energy immediately preceding application of the overvoltage.

Polymer Housed Arresters (Type PVI-LP)

Construction & Features

- MOV blocks are encased within a tightly woven fiberglass braid impregnated with epoxy resin. Silicone dielectric compound fills the interface between fiberglass and rubber housing to render a void-free and hydrophobic assembly.
- Design prohibits leakage and pumping of air across hermetic seals in order to eliminate moisture ingress, a cause of arrester failure.
- Polymer housings are resistant to impact damage and will not shatter in case of a failure.
- Typically less than half the weight of comparable porcelain arresters. This makes transportation, handling and installation much easier.
- Small line end hardware allows close spacing.

(2) Minimum clearances are based on arrester protective levels for standard configuration and should be increased to meet local requirements for spacing of energized equipment.

Note that alternate builds with additional creepage distance are shaded.

For non-catalog polymer arresters that require higher creep distance or special application please consult your Hubbell Power Systems representative.

PVI-LP Terminals and Hardware

- Clamp type terminals for line and ground are hot dip galvanized iron and will accommodate copper or aluminum conductor sized from 6 mm to 21mm diameter.
- Standard Hardware Code 3010 includes line and ground terminals pictured (Example: 30YXXX-3010)
- For other terminal options please consult your Hubbell Power Systems Representative.

Polymer Housed Surge Arresters (Type EVP)

Overview

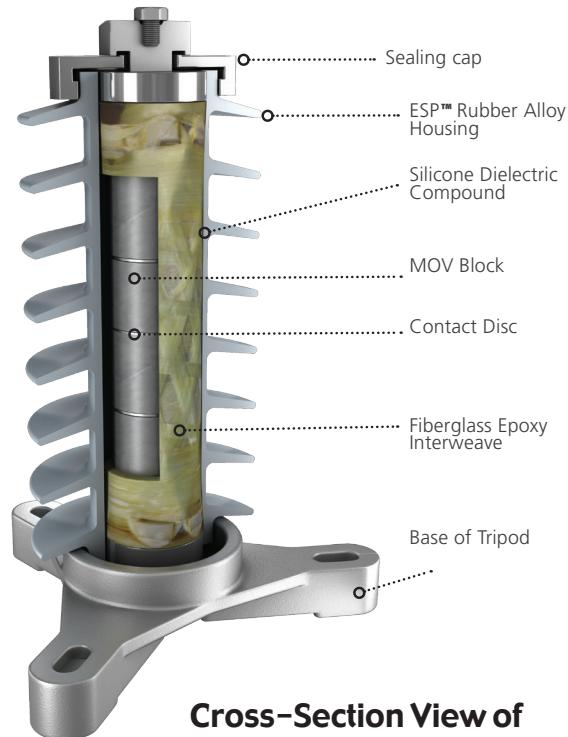

The new EVP Polymer Housed Station Arrester by HPS and Ohio Brass represents the absolute latest in surge arrester technology. Based on proven PVN technology, our EVP line maintains our proprietary ESP™ weathershed material and protective levels. However, it has an even more robust sealing system to reduce moisture ingress to an unprecedented minimum. EVP arresters also feature a redesigned housing profile for maximum material utilization, and even make ordering easier by using an intelligent numbering system.

Construction

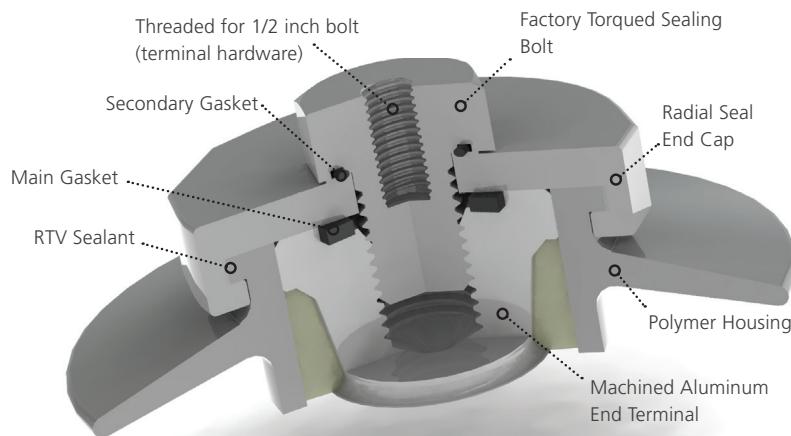

- Optimized wrap pattern and end hardware
- Even more effective sealing system
- Aluminum Top Cap
- Tri-pod base (standard 8.75" to 10" BC) Slotted

Sustainability Features

- 25% Recycled Packaging Material
- 15% Less Production Mass
- 50% Recyclable Packaging

(2) Center-to-center spacing is based on arrester protective levels for standard configuration and should be increased to meet local requirements for spacing of energized equipment

Common Arrester Accessories / Hardware

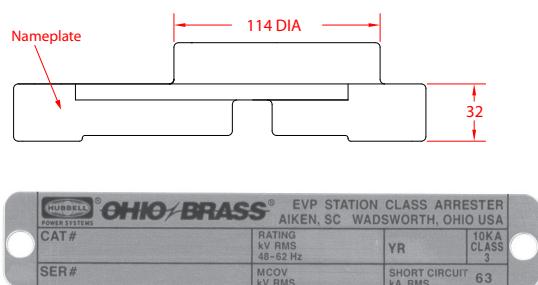

Figure 1:
EVP Base Tripod Side View
with nameplate location

EVP Nameplates

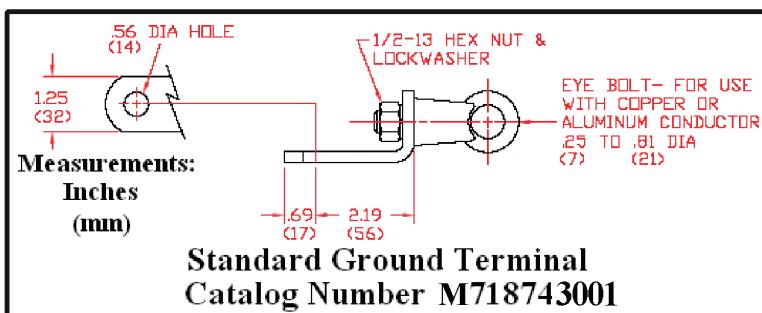

Each arrester is identified with a nameplate attached to the bottom or top casting with information required by IEEE/ANSI, CSA and IEC.

These nameplates display the maximum continuous operating voltage rating, the duty cycle voltage rating, the pressure relief current rating, the catalog number, serial number and the year of manufacture.

Standard Ground Terminal Assemble

Standard ground terminal includes HDG L-bracket and clamp terminals sized for conductor 7-21 mm dia. (25-250 mm²)

Base Mounting Information

Arrester MCOV (kV)	Bolt Circle (inches)	Bolt Size (inches)	Attachment Lug	
			Thickness (Inches)	Hole Size (Inches)
2.55-180	10.0	0.50	1.25	0.56

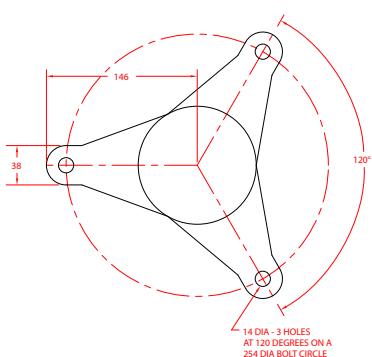

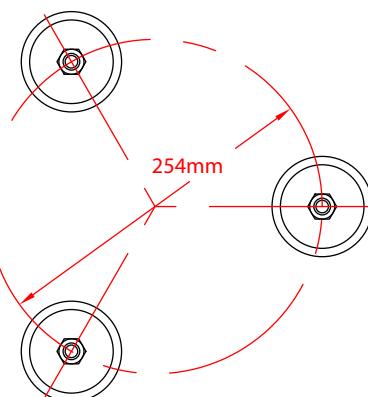

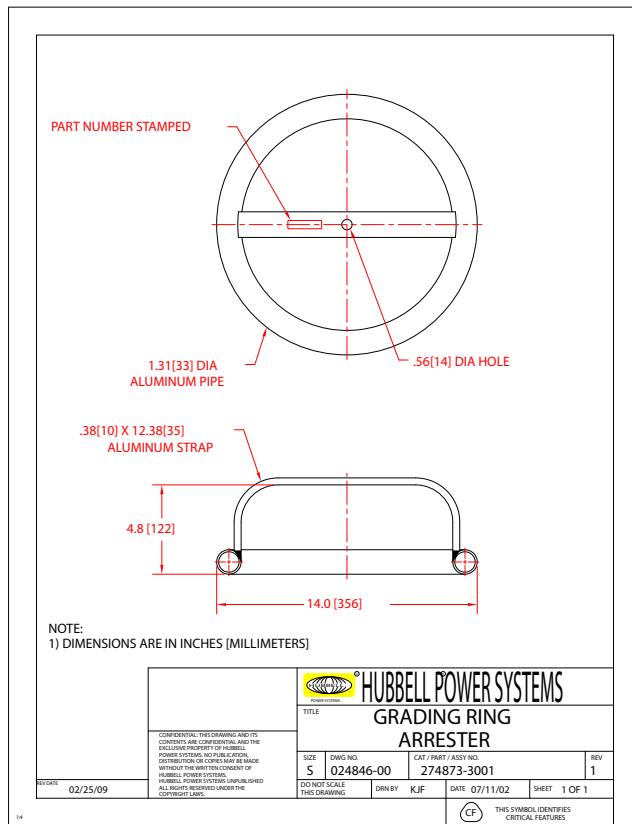

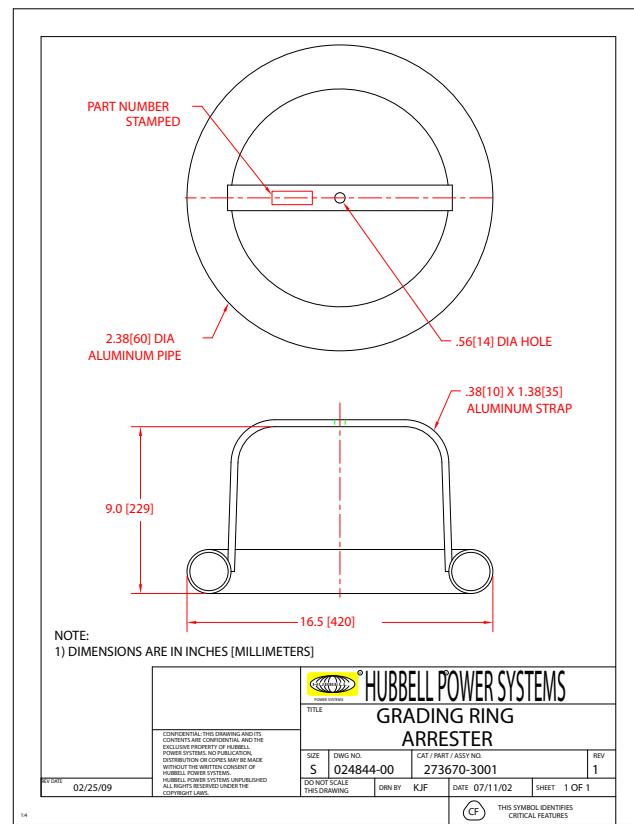

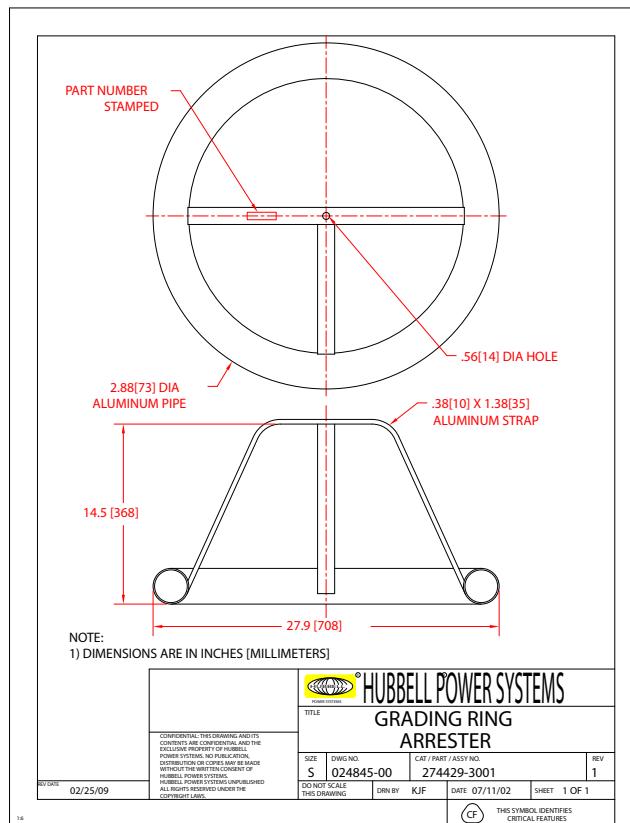

Figure 2
EVP Base Tripod with 14mm holes
for 254mm bolt circle mounting

EVP Packaging

EVP arresters 1.5 meters are longer must be packed in a wooden crate. All -3010 suffix arresters are also packed in wooden crates. Grading rings if required are packed together stacked on a separate wooden pallet.

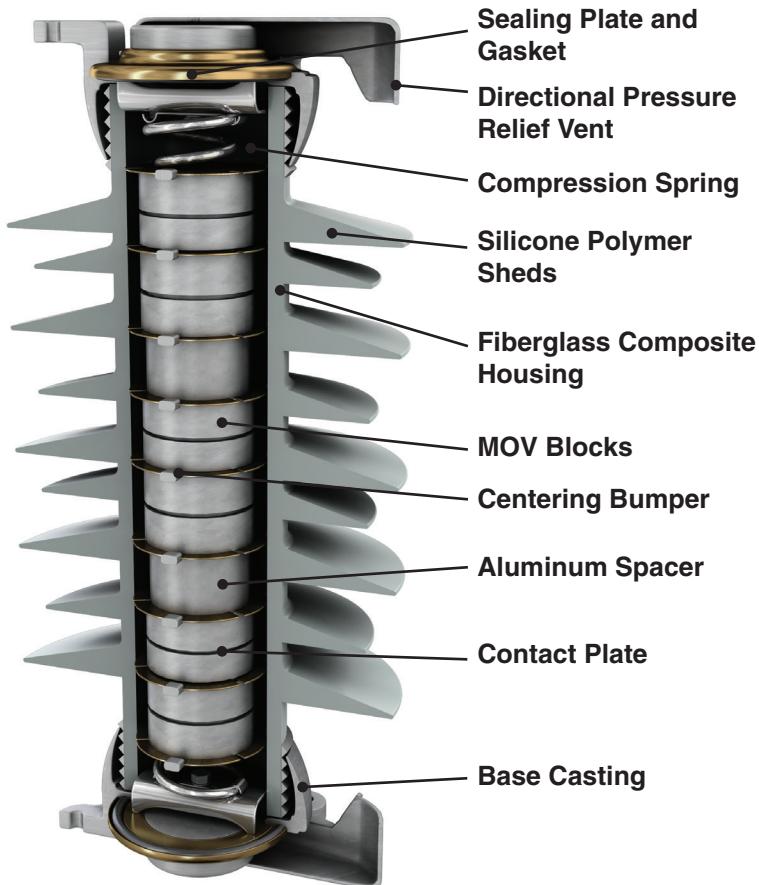

Grading Ring Drawings

356 mm ring 274873-3001

419 mm ring 273670-3001

708 mm ring 274429-3001

Polymer Housed Arresters (Types PH3 & PH4)

Construction

- Fiberglass Composite Tube Design
- Silicone Rubber Housing
- Nearly 50% lighter than comparable porcelain arrester
- Arrester Sealing verified by two high vacuum leak tests
- High mechanical strength
- High creepage distance designs available
- Same high quality MOV technology as all other Ohio Brass arresters

Cross-Section View of Polymer Composite Housed Arrester

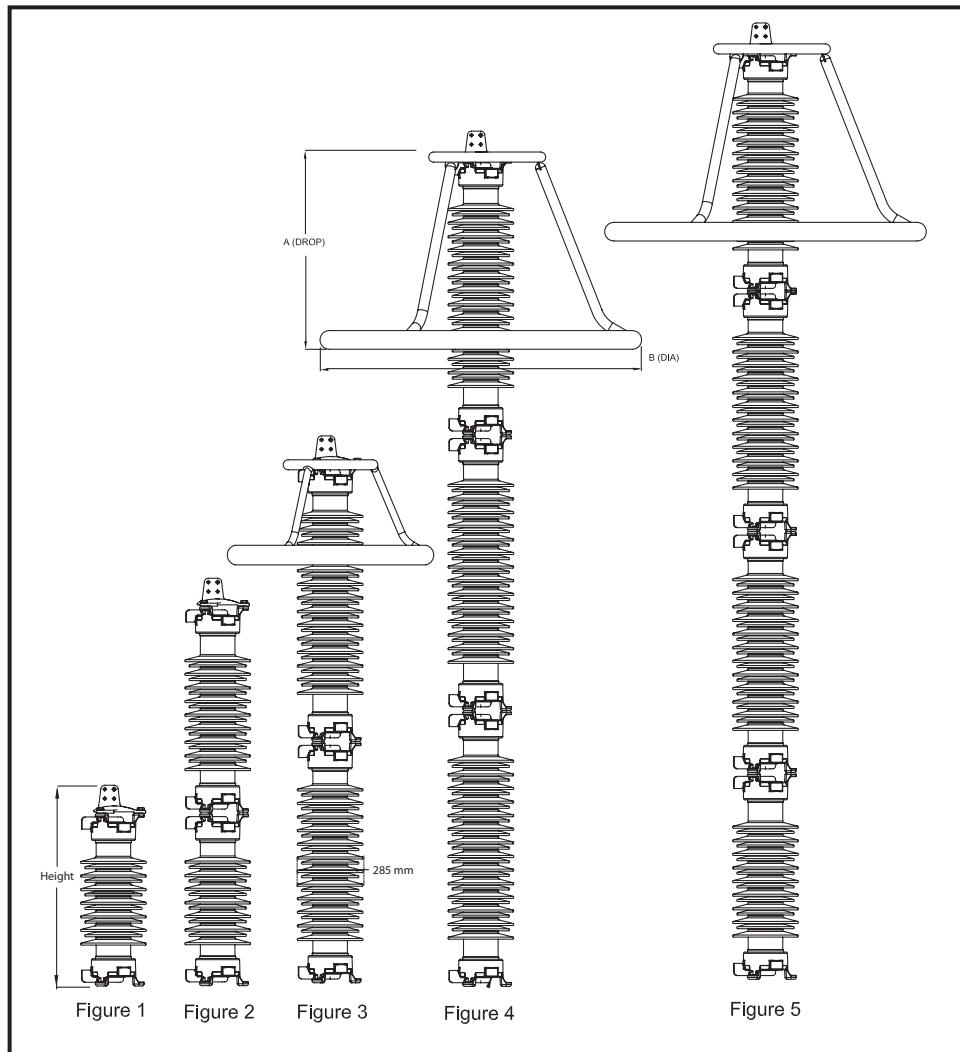

For non-catalog polymer arresters that require higher creep distance or special application please consult your Hubbell Power Systems representative.

Table 7: Type PH3 & PH4 Overview

Product Type	Nominal Discharge Current (kA)	Line Discharge Class	Voltage Rating Range (kV)	Pressure Relief (kA)	Cantilever Strength* (N.m)
PH3	10	3	24-420	63	8,000
PH4	20	4	24-420	63	8,000

*SSL – Specified Short-Term Load

Polymer Housed IEC Class 3 and 4 Arrester

Ohio Brass PH3 & PH4 Ordering System:

Use the following selection tables to build the correct Ohio Brass PH3 or PH4 Catalog Number

Catalog Ordering System											
A	B	C	D	E	F	G	H	I	J	K	L
P	H				G						

Step 1: Select the IEC Line Discharge Class from Table 8 and fill in cell B.

Table 8

Arrester Class	B
Class 3 - PH3 Arrester	3
Class 4 - PH4 Arrester	4

Step 2: Select the Max System Voltage (Um) from Table 9 and fill in Cells C through E.

Table 9

Max System Voltage (kV)	C	D	E
36	0	3	6
52	0	5	2
72	0	7	2
100	1	0	0
123	1	2	3
145	1	4	5
170	1	7	0
245	2	4	5
300	3	0	0
362	3	6	2
420	4	2	0

Step 3: Polymer color is gray only.

Table 10

Polymer Color	F
Gray	G

Step 4: Select the appropriate Site Pollution Serenity Class from Table 11 and fill in cell G.

Table 11

Site Pollution	G
Medium (≥ 20 mm creep per kV U _m)	M
Heavy (≥ 25 mm creep per kV U _m)	H
Very Heavy (≥ 31 mm creep per kV U _m)	V

NOTE: Pollution classes per IEC - 600815-1

Step 5: Select the appropriate Rated Voltage (Ur) from Table 12 that corresponds with the Max System voltage selected for C through E and fill in Cells H through J.

Table 12

Max System Voltage (kV)	Rated Voltage (kV)	H	I	J

Step 6: Select the appropriate Line and Ground terminals based on the conductor size ranges in Table 13 and fill in K & L.

Table 13

Line Size (mm ²)	Ground Size (mm ²)	K	L
25 - 240	25 - 240	A	A
	70 - 630	A	B
	500 - 1000	A	C
70 - 630	25 - 240	B	A
	70 - 630	B	B
	500 - 1000	B	C
500 - 1000	25 - 240	C	A
	70 - 630	C	B
	500 - 1000	C	C

PH3 Catalog Ordering Example

- Max System Voltage – 145kV
- Gray Polymer
- Heavy Pollution Level
- Rated Voltage – 120 kV
- Line & Ground Size - 25 to 240mm

Step 1: Use Max system Voltage to fill in C through E – 145kV

◆ (PH3145xxxxxx)

Step 2: Select Gray Polymer – G

◆ (PH3145Gxxxxx)

Step 3: Select Heavy Pollution – H

◆ (PH3145GHxxxx)

Step 4: Select Rated Voltage – 120kV

◆ (PH3145GH120xx)

Step 5: Select correct terminals

◆ (PH3145GH120AA)

Step 6: Order Ohio Brass Catalog Number

◆ PH3145GH120AA

PH4 Catalog Ordering Example

- Max System Voltage – 145kV
- Gray Polymer
- Heavy Pollution Level
- Rated Voltage – 120 kV
- Line & Ground Size - 25 to 240mm

Step 1: Use Max system Voltage to fill in C through E – 145kV

◆ (PH4145xxxxxx)

Step 2: Select Gray Polymer – G

◆ (PH4145Gxxxxx)

Step 3: Select Heavy Pollution – H

◆ (PH4145GHxxxx)

Step 4: Select Rated Voltage – 120kV

◆ (PH4145GH120xx)

Step 5: Select correct terminals

◆ (PH4145GH120AA)

Step 6: Order Ohio Brass Catalog Number

◆ PH4145GH120AA

Seismic Performance of PH3 Arresters per IEEE 693-2005

High (1.0g ZPA) for 2-unit arresters up to $U_r = 288\text{KV}$

Moderate (0.5g ZPA) for 3-unit arresters up to $U_r = 420\text{KV}$

2721453076 subbase recommended for 3-unit arresters

Seismic Performance of PH4 Arresters per IEEE 693-2005

High (1.0g ZPA) for 2-unit arresters up to $U_r = 288\text{KV}$

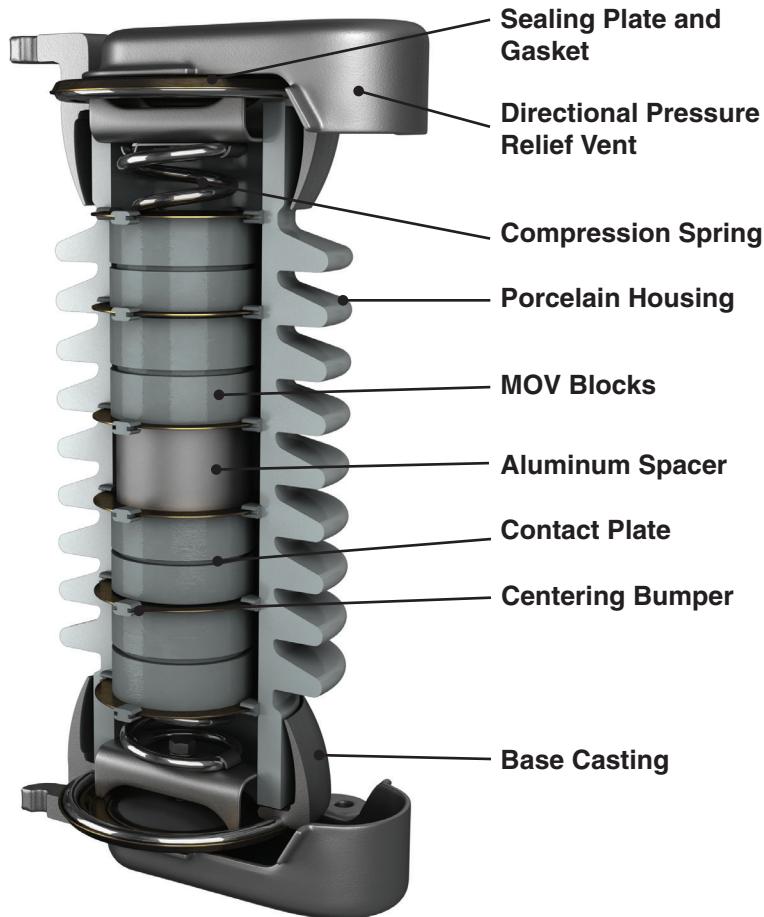

Moderate (0.5g ZPA) for 3-unit arresters up to $U_r = 420\text{KV}$

2721453076 subbase recommended for 3-unit arresters

Porcelain Housed Arresters (Type MH3, MH4 & H5)

Construction

- Rigid, high strength porcelain housing with a long service history
- Compression spring ensures a consistent electrical connection between blocks
- Directional Venting: Pressure relief rupture plate ensures the housing will vent out the end of the arrester. Arc will be directed to the side of the arrester through the pressure relief vent.
- Arrester Sealing verified by two high vacuum leak tests
- Meets requirements for High Seismic Performance Rating per IEEE 693-2005 through 420kV rating.
- Type H5 includes two MOV block columns for extra high energy.

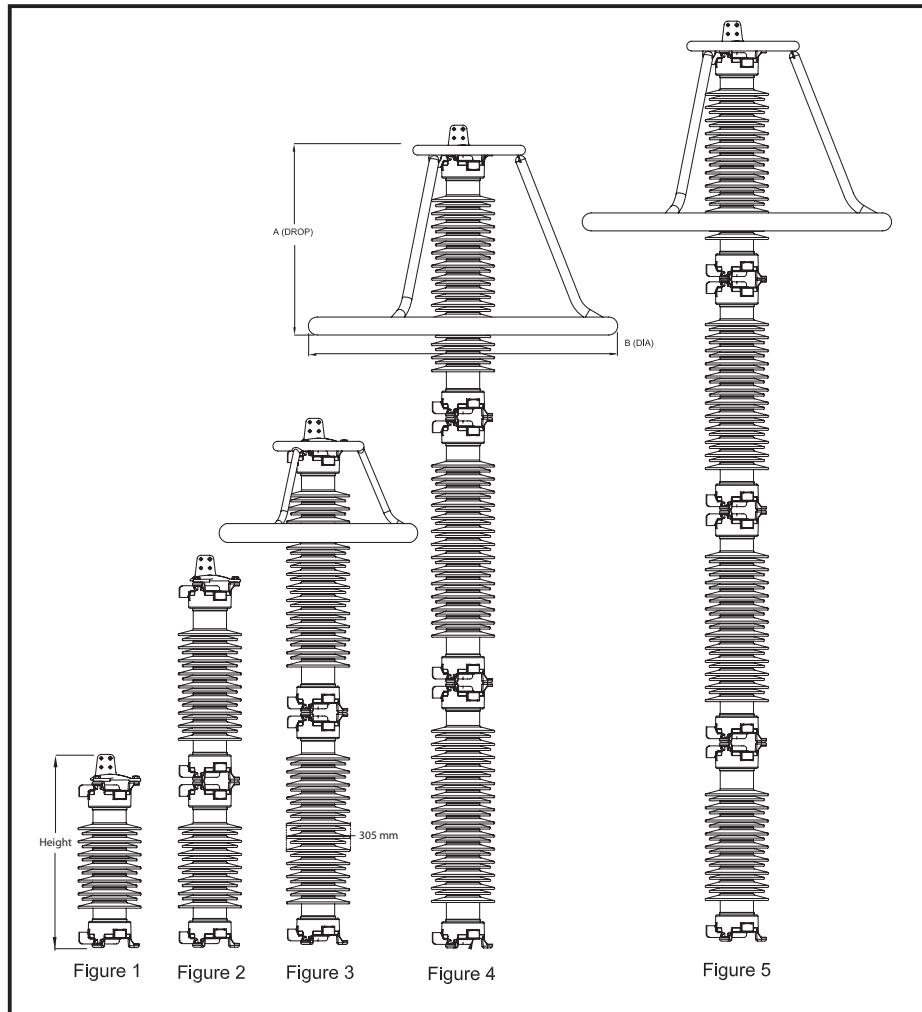

**Cross-Section View of
Porcelain Housed Arrester**

Table 14: Porcelain Housed Arresters Overview

Product Type	Nominal Discharge Current (kA)	Line Discharge Class	Voltage Rating Range (kV)	Pressure Relief (kA)	Cantilever Strength* (N.m)
MH3	10	3	24-420	63	17,000
MH4	20	4	24-420	63	17,000
H5	20	5	550-800	63	31,000

* SSL – Specified Short-Term Load

Porcelain Housed IEC Class 3 and 4 Arrester

Ohio Brass Porcelain Ordering System:

Use the following selection tables to build the correct Ohio Brass MH3 or MH4 Catalog Number. Please see H5 information on page 204-40 to find available H5 Arresters.

Catalog Ordering System											
A	B	C	D	E	F	G	H	I	J	K	L
M	H										

Step 1: Select the correct arrester line discharge class from Table 15 and fill in B.

Table 15

Arrester Class	B
Class 3 - MH3 Arrester	3
Class 4 - MH4 Arrester	4

Step 2: Select the Max System Voltage (U_m) from Table 16 and fill in Cells C through E.

Table 16

Max System Voltage (kV)	C	D	E
36	0	3	6
52	0	5	2
72	0	7	2
100	1	0	0
123	1	2	3
145	1	4	5
170	1	7	0
245	2	4	5
300	3	0	0
362	3	6	2
420	4	2	0

Step 3: Select the appropriate Porcelain Color from Table 17 and fill in F.

Table 17

Porcelain Color	F
Gray	G
Brown	B

Step 4: Select the appropriate Site Pollution Severity Class from Table 18 and fill in G.

Table 18

Site Pollution	G
Medium (≥ 20 mm creep per kV U_m)	M
Heavy (≥ 25 mm creep per kV U_m)	H
Very Heavy (≥ 31 mm creep per kV U_m)	V

NOTE: Pollution classes per IEC - 600815-1

Step 5: Select the appropriate Rated Voltage (Ur) from Table 19 that corresponds with the Max System voltage selected for C through E and fill in Cells H through J.

Table 19

Max System Voltage (kV)	Rated Voltage (kV)	H	I	J

Step 6: Select the appropriate Line and Ground terminals based on the conductor size ranges in Table 20 and fill in K & L.

Table 20

Line Size (mm ²)	Ground Size (mm ²)	K	L
25 - 240	25 - 240	A	A
	70 - 630	A	B
	500 - 1000	A	C
70 - 630	25 - 240	B	A
	70 - 630	B	B
	500 - 1000	B	C
500 - 1000	25 - 240	C	A
	70 - 630	C	B
	500 - 1000	C	C

MH3 Catalog Ordering Example

- Max System Voltage – 72kV
- Gray Porcelain
- Medium Pollution Level
- Rated Voltage – 60 kV
- Line & Ground Size - 25 to 240mm

Step 1: Use Max system Voltage to fill in C through E – 145kV

◆ (MH3072xxxxxx)

Step 2: Select Gray Porcelain – G

◆ (MH3072Gxxxxxx)

Step 3: Select Medium Pollution – M

◆ (MH3072GMxxxxxx)

Step 4: Select Rated Voltage – 60kV

◆ (MH3072GM060xx)

Step 5: Select correct terminals

◆ (MH3072GM060AA)

Step 6: Order Ohio Brass Catalog Number

◆ (MH3072GM060AA)

MH4 Catalog Ordering Example

- Max System Voltage – 145kV
- Gray Porcelain
- Heavy Pollution Level
- Rated Voltage – 120 kV
- Line & Ground Size - 25 to 240mm

Step 1: Use Max system Voltage to fill in C through E – 145kV

◆ (MH4145xxxxxx)

Step 2: Select Gray Porcelain – G

◆ (MH4145Gxxxxxx)

Step 3: Select Heavy Pollution – H

◆ (MH4145GHxxxxxx)

Step 4: Select Rated Voltage – 120kV

◆ (MH4145GH120xx)

Step 5: Select correct terminals

◆ (MH4145GH120AA)

Step 6: Order Ohio Brass Catalog Number

◆ (MH4145GH120AA)

Seismic Performance of MH3 Arresters per IEEE 693-2005

High (1.0g ZPA) for all 2-unit and 3-unit arresters

2721453076 subbase recommended for multi-unit arresters

Seismic Performance of MH4 Arresters per IEEE 693-2005

High (1.0g ZPA) for all 2-unit and 3-unit arresters

2721453076 subbase recommended for multi-unit arresters

H5 Porcelain Housed IEC Class 5 Arrester

H5 Protective Characteristics

Terminal Options

- ◆ A standard 4-hole suspension cap and standard ground terminals similar to the Class 3 and 4 arresters are available for the H5 arrester family.
- ◆ Due to the extremely high system voltages, various other terminal options exist to meet your connection requirements.
- ◆ Please consult your Hubbell Power Systems representative to discuss these additional connection options.

Arrester FAQs

1. What is the difference between a grading ring and a corona ring?

A grading ring is used to ensure a uniform voltage distribution along the length of an electrical device. This is important for surge arresters so that each MOV block in the arrester is energized at the appropriate voltage. The ring mounts downwards from the top of the arrester along the length of the graded blocks.

A corona ring is traditionally used to electrically shield external hardware to prevent corona discharge effects from developing. This corona could lead to degradation of insulating materials or create interference to electronic communication. The ring mounts upwards like a crown from the top of the arrester. Surge arresters below 500KV system voltage do not typically need corona rings.

2. How do I know if I need a grading ring or corona ring for my arrester?

The Hubbell/Ohio Brass Engineers have performed all necessary electric field calculations to make this decision. Therefore, all of our surge arrester part numbers already include rings if required and the end user does not specify the rings – they ship automatically with the arrester, stacked on a separate pallet.

3. Why is the system grounding type important to consider when selecting the U_c/U_r rating?

The type of grounding determines the amount of neutral shift during a fault on the power system. The resulting TOV on the arrester could damage it unless the arrester rating is up-sized properly. Your Hubbell Power Systems sales representative can help with the selection of the proper size arrester for your application.

4. How do I use the pressure relief rating value in making an arrester selection?

If a surge arrester fails it will become shorted and can conduct the available short-circuit current in the substation. To minimize the possibility of a catastrophic failure, the selected arrester should have a pressure relief rating that is greater than the short-circuit current available in the substation.

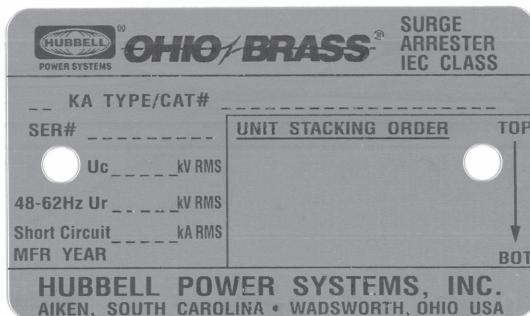

5. What routine maintenance and testing does Hubbell Power Systems recommend for station class surge arresters?

Hubbell Power Systems arresters are designed to provide years of operating service outdoors without any required maintenance or testing. The most commonly performed maintenance is pressure washing of the housing. The most commonly performed field test of arrester health is in-service infrared analysis to determine if the arrester shows a long term trend of increasing heat buildup which may indicate replacement is needed if the heat becomes excessive.

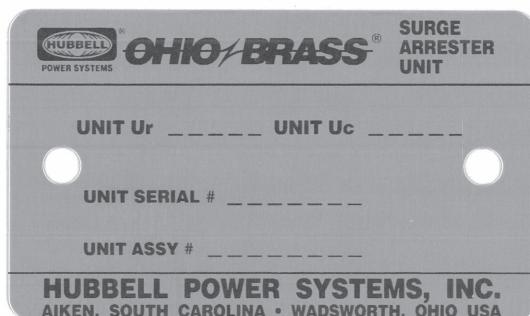

6. I have a question that is not covered in this section.

We'll be happy to answer any of your arrester questions and we design customized arresters to meet many application needs. Just contact your local Hubbell Power Systems sales representative or call our main customer service line at (+1) 573.682.5521.

Common Arrester Accessories / Hardware

Arrester nameplate attached to bottom unit of each arrester

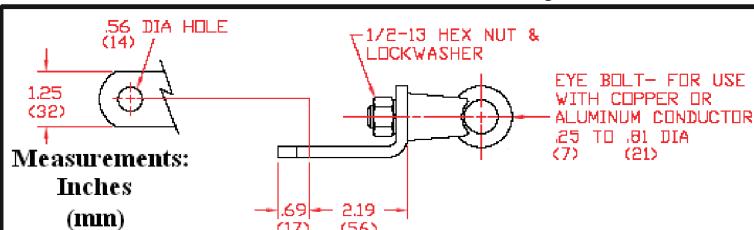

Unit nameplate attached to every unit of arrester.

NOTE: Additional information can be engraved on a blank nameplate. Requires custom catalog number.

Standard ground terminal includes HDG L-bracket and clamp terminals sized for conductor 7-21 mm dia. (25-250 mm²)

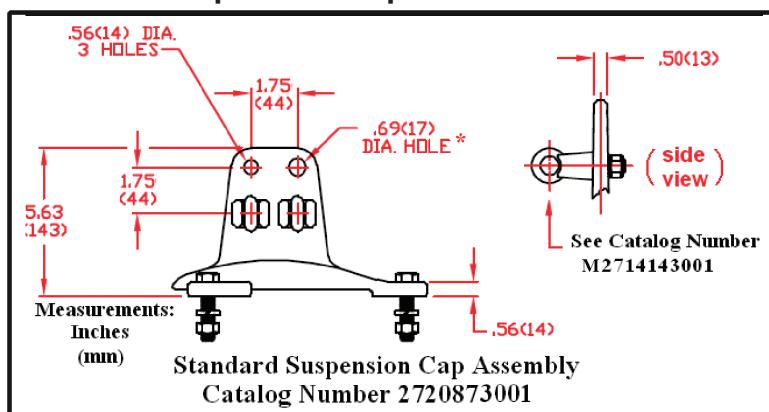

Standard Ground Terminal Assembly

Standard Ground Terminal Catalog Number M718743001

Standard Suspension Cap

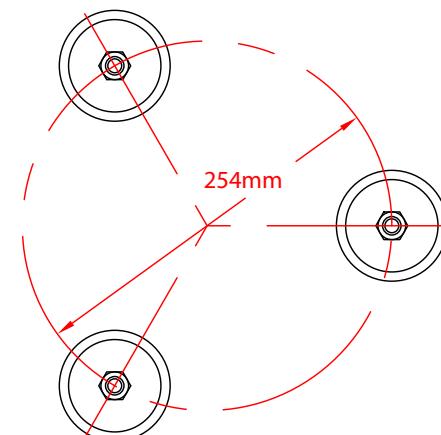

*NOTE: 17 mm hole used for lifting hook.

HDG suspension cap with integrated 4-hole NEMA pad is furnished with all MH3, MH4, PH3, PH4 arresters to fit the 254mm bolt circle.

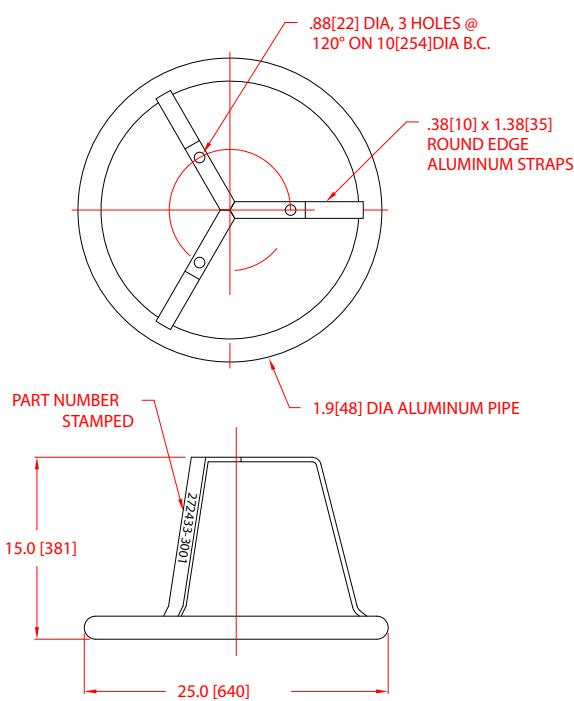

The oversized 17mm hole is provided to be used with a lifting hook and crane.

All MH3, MH4, PH3, PH4 arresters mount to a 254mm bolt circle, which may include sub-bases (see page 5).

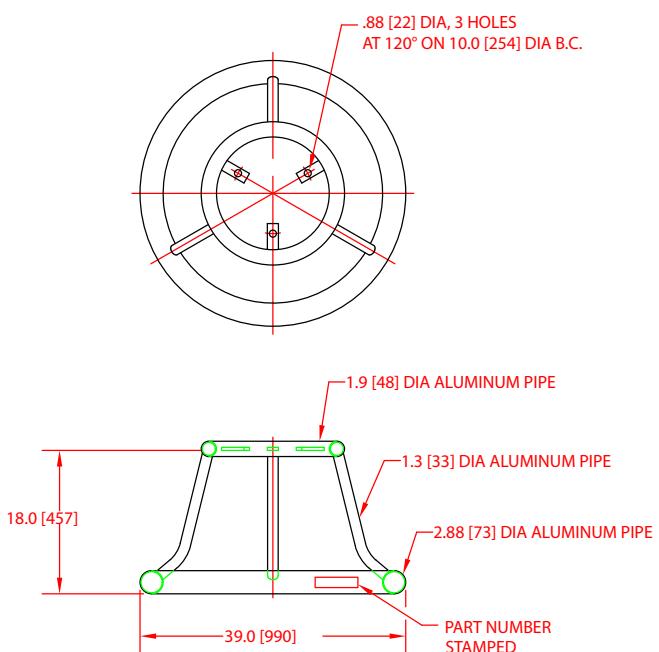

Grading Ring Drawings

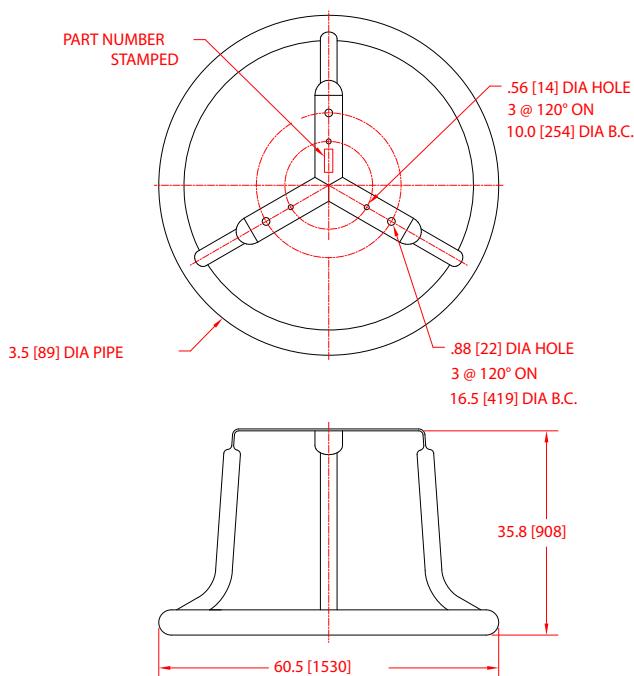

NOTE:
1) DIMENSIONS ARE IN INCHES [MILLIMETERS]

640 mm Ring 272433-3001

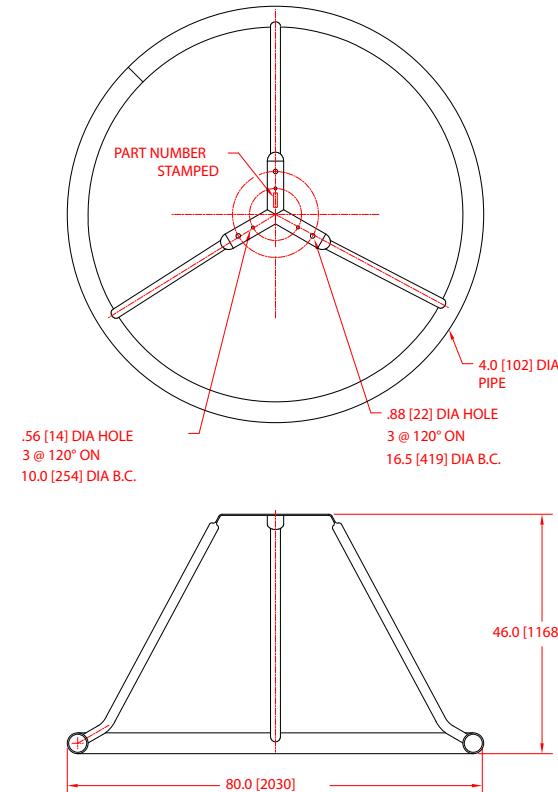

NOTES:
1) DIMENSIONS ARE IN INCHES [MILLIMETERS]

990 mm Ring 272807-3001

NOTE:
1) DIMENSIONS ARE IN INCHES [MILLIMETERS].

1530 mm Ring 274296-3001

NOTE:
1) DIMENSIONS ARE IN INCHES [MILLIMETERS].

2030 mm Ring PSB274008-3001
